---

Dear Client of A2Z Diagnostics,

As is our usual and customary practice, we are providing you with an update regarding our Molecular and Pathology program.

We recently added our third COVID-19 PCR platform, the FDA EUA approved Bio-Rad/Atila dry swab PCR platform which allows us to do several thousand COVID-19 PCR tests for many situations including pre-procedure, back to school and back to work testing, in addition to those exposed or possibly exposed to COVID-19. The Atila COVID-19 Assay is an isothermal multiplex real-time reverse-transcriptase PCR technology used to detect SARS-CoV-2 virus directly from dried swabs in less than 90 minutes.

The Atila Assay is an extremely sensitive (100%) and specific (99%) assay with the ability to detect viral particles (RNA) at extremely low levels. The false positive and false negative rates are therefore extremely low. Our rapid turnaround time has allowed us to expedite reporting of cases to keep those at risk quarantined more expeditiously to stop the spread of COVID-19. Given the rapid TAT, this has allowed those patients who are being tested for a procedure to significantly decrease the amount of time they will need to quarantine before their procedure. We have recently expanded our offering to include a second Bio-Rad/Atila machine.

We now offer the ability to test your patient by serology for IgG and IgM antibodies on whole blood samples without the need for centrifuging the sample.

A2Z Diagnostics, LLC is currently validating a saliva test for EUA approval which will add another modality of testing to our arsenal.

For those clients who perform biopsies, our long-standing pathology program for groups to employ their own pathologist continues to be at the forefront of the lab industry. Our full-scale laboratory also offers PCR testing for Wound, UTI, Respiratory and GI Pathogen testing.

We will also be offering our electronic requisition ordering for ease of ordering without the need for paper requisition.

Should you have any questions or concerns regarding any aspect of our program, feel free to reach us at the lab to discuss your inquiries.

Sincerely,  
A2Z Diagnostics
